

OMBRE/POWDER AND MICROSHADING BROWS AFTER CARE INSTRUCTIONS

The healing may take up to 28 days after your initial tattoo appointment.
Failure to follow instructions will cause patchy healed results.

- Do not wet your eyebrows for the first 7 days.
- Do not touch the healing pigment area with fingers to avoid getting bacteria on them
- On the 3rd day until the procedure area has healed, apply a thin layer of the post-care ointment twice a day. Use a clean swab for application
- Do not pick on the scabs & let them fall out naturally
- Brows will itch but do not scratch

AVOID THE FOLLOWING DURING ALL 14 DAYS POST PROCEDURE:

- Brow makeup
- Practicing sports
- Sun tanning or salon tanning
- Swimming
- Hot saunas, hot bath or Jacuzzi
- Any laser or chemical treatments, and/or creams containing Retina-A or Glycolic acid on the face or neck
- Do not rub or traumatize the procedure area while it is healing
- Don't remove any scabs that may form on the treated area as this may remove pigment along with it

WHAT TO EXPECT

- Normal Symptoms: Flaking, tenderness, dryness and itching, swelling and redness.
- Brows will darken in the next few days
- Brows will begin to crack and scab
- Brows will appear to be light and patchy
- Then over the next 7-days the color will fade and may take 4-6 weeks for the true color to come through
- Healed results will be slightly lighter than the color immediately after the procedure

Please send selfies and photos of your brows while they are healing and after they have healed.
